Niacin	10.000 mg

STANDARD PACKING:

1 litre bottle
5 litres canister

MYVIT NO STRESS

Nutritional Supplements for Application via Drinking Water

MYVIT NO STRESS is specifically studied in order to give relief to the poultry and improve the situation, contributing to better feed intake and performance

Feather pecking is a behavioral problem that occurs most frequently in poultry. It occurs when one bird repeatedly pecks at the feathers of another. Severe feather pecking is painful for the receiving bird and can lead to trauma of the skin or bleeding, which in turn can lead to cannibalism and death.

Feather pecking is one of the major problems facing the egg industry in non-cage systems and is set to become an even greater issue with the EU legislation (Council Directive 1999/74/EC) especially in the prospect of a ban on beak-trimming. There are several factors causing nervousness that leads to cannibalism and mortality. Several aspect have an import incidence on the phenomena such as Management, housing and genetics have strong influence on this aspect.

The diet is a main issue, high yield in combination with lack of essential ingredients in the diet lead to agitation and feather picking.

DOSAGE:

Poultry and rabbits: 0,5-1 ml / 2 liters drinking water for 5 – 7 days
