**Pharmacology &
Indications:**

MURA VET PLUS, a combination product of compounds, based on natural extracts from egg albumen (Lysozyme), an active immune-modulating and stimulating agent and several studies have shown its capability of suppressing tumor cells (Kovacs-Nolan et al., 2005).

The FAO/WHO and many countries such as Austria, Australia, Belgium, Denmark, Finland, France, Germany, Italy, Japan, Spain, and the United Kingdom have acknowledged the nontoxicity of lysozyme and have approved its use in some foods and for pharmacological and therapeutic applications.

It has been estimated that more than 100 tons of lysozyme is used annually for this purpose. .

It also can be used as preservative. Several patents claim the effectiveness of lysozyme at low concentrations to prevent the development of undesirable microorganisms for more than 24 months

Withdrawal Period:

In meat. Milk, eggs, and all animal by-products, none

**Contraindications /
side effect or rare side
effects**

Non tolerance to egg protein and egg by-products, otherwise none
